Hi Kim/David –

We are looking into this. Sri believe all the raw data from SDX was converted but not sure what was not. We have reached out to Manish and Sreekanth and they are looking into it to confirm their understanding.

I will get back to you as soon as I can get something from them

Thanks,
Saurabh

Thanks Kim. I have asked Ryan to provide one or two examples.

Your point about the “interpreted” date does sound correct, but I would also not be 100% confident in saying that was it.

I will send the examples from Ryan once I receive them.

Thanks,
David

David,

I'm including Saurabh and Sudharsan to see if they remember the details. Sri would probably be the best to answer, but I believe he is still out on paternity leave.

As I recall, and this is probably suspect, we brought in the raw master SDX information, but not the data that had been "interpreted" by MMIS because TEDS was going to be interpreting that data differently and it wouldn't be apples to apples. I think it would be helpful to get some examples from Ryan and have Natasha or someone from policy take a look at them too.

Saurabh or Suds, do you remember anything different?

Thanks,
 Kim

Kim,
 Do you recall the reason for us deciding to not convert historical SSI Master and Bendex data from the MMIS to TEDS? I know we did not want staff to refer to this information in iC after the interface with SSA was stopped in the MMIS; since updates would no longer occur and there would be a potential for use of out dated information in using overrides to obtain eligibility approval.

However, I do not remember why we did not want to bring in the historical data initially.

Thanks,
 David

Hi David,

We received the email below, and we wanted to get your input on Ryan's suggestion. Please let us know your thoughts on next steps for this.

Thanks,

Subject: TEDS improvement idea

Good morning,

I have been reviewing a number of SSI related cases/appeals of late. I have noticed that there is historical data in the SSI Master & Bendex database in interChange/MMIS that has not been integrated into TEDS. EOG has been instructed to not use this data. This is leading to incorrect eligibility determinations, particularly as it relates to the former SSI related categories (Pickle Passalong, DAC, and Widow/Widower).

In some instances I have submitted tickets. However, particularly for members/appellants/applicants who lost their SSI eligibility in the 80's and 90's with no subsequent SSI activity to cause an SDX file to be resubmitted to the TennCare, this data is lost.

The idea would be an integration of this data into TEDS. If examples are needed, they can be provided.

I'm not sure on the best way for this to be integrated. However, especially if we are wanting workers to rely solely on what is available in TEDS and to make correct eligibility determinations, the information is necessary.

I'm happy to collaborate any more on this or answer any questions that may arise.

Thank you!
